INGLÉS TÉCNICO II

Año 2023

Profesora Verónica de Loredo

Los textos en inglés y en español: elementos en común

Los aspectos formales de un texto escrito

Lo primero que vamos a hacer es aproximarnos a un texto escrito en inglés con el propósito de sacar algunas conclusiones. No se espera aquí que comprendan el contenido del mismo.

Recorra con la vista rápidamente el texto y conteste las preguntas de la derecha.

Electrical engineering From Wikipedia, the free encyclopedia Electrical engineering is a field of engineering that generally deals with the study and application of electricity, electronics, and electromagnetism. This field first became an identifiable occupation in the latter half of the 19th century after commercialization of the electric telegraph, the telephone, and electric power distribution and use. Subsequently, broadcasting and recording media made electronics part of daily life. The invention of the transistor and, subsequently, the integrated circuit brought down the cost of electronics to the point where they can be used in almost any household object. The personal computer and information technology are the most complex electronics yet to be used in everyday life. Electrical engineering has now subdivided into a wide range of subfields including electronics, digital computers, power engineering, telecommunications, control systems, RF engineering, signal processing, instrumentation, and microelectronics. The subject of electronic engineering is often treated as its own subfield but it intersects with all the other subfields, including the power electronics of power engineering. Electrical engineers typically hold a degree in electrical engineering or electronic engineering. Practicing engineers may have professional certification and be members of a professional body. Such bodies include the Institute of Electrical and Electronic Engineers (IEEE) and the Institution of Engineering and Technology (IET). Electrical engineers work in a very wide range of industries and the skills required are likewise variable. These range from basic circuit theory to the management skills required of project manager. The tools and equipment that an individual engineer may need are similarly variable, ranging from a simple voltmeter to a top end analyzer to sophisticated design and manufacturing software.	1. ¿Cuál es el título del texto? …… 2. ¿De qué fuente se extrajo el texto? …… 3. ¿Cuántos párrafos hay? …… 4. ¿Cuántas oraciones tiene el primer párrafo? …… 5. ¿De qué se tratará el texto? ……

Para responder las primeras tres preguntas aplicamos estrategias de lectura que hemos desarrollado en nuestro propio idioma. Nos guían los elementos formales del texto (mayúsculas, signos de puntuación, tamaño de letra, etc.), que son similares en inglés y en español. A lo largo de este año descubriremos qué se necesita para responder la última pregunta.

ESTRATEGIAS DE LECTURA

Antes de leer: ANTICIPACIÓN-PREDICCIÓN

a) Observar el texto.

b) A partir del título, foto, dibujo o gráfico, el epígrafe y del paratexto en general predecir cuál será el tema.

Inglés Técnico II

PRIMERA LECTURA:

Seis claves para la comprensión de palabras dentro de un texto.

1) **Palabras transparentes:** Estas palabras, parecidas a palabras de nuestro idioma, provienen del latín o del griego generalmente y se las llama "palabras transparentes". La mayoría de las palabras transparentes tienen el mismo significado en ambos idiomas.

Sin embargo, hay algunas excepciones que conviene tener en cuenta, para aplicar cuando el significado que tiene una palabra en español no tiene sentido dentro del contexto de lo que leemos en inglés. Se la llama "falsos amigos", y a continuación hay algunos ejemplos:

INGLÉS	***ESPAÑOL***
Sensible	Sensato
Sensitive	Sensible
Relieve	Aliviar
Attend	Asistir (a un lugar o evento)
Assist	Atender (personas); brindar asistencia
Injuries	Lesiones
Actual	Real, verdadero
Exit	Salida
Embarrassed	Avergonzado
Library	Biblioteca
Large	Grande

2) **Préstamos lingüísticos:** Otro recurso para comprender mejor un texto en lengua extranjera consiste en detectar vocablos, como target, web, Internet, offline, online, marketing, y asignarles el significado correcto. Este tipo de palabras no son transparentes sino que provienen del inglés pero ya están tan incorporadas a nuestra lengua que a veces ni siquiera notamos que no pertenecen al español. Estos términos, que se denominan **préstamos lingüísticos**, suelen estar asociados con áreas específicas como el mundo de los negocios (marketing), el comercio (sale), la informática (software), la medicina (bypass), etcétera, y es por eso que a veces resulta una tarea ardua encontrar una palabra de nuestra lengua que sea exactamente equivalente. No obstante, también hay una cantidad de palabras "prestadas" que se relacionan con la vida cotidiana como por ejemplo: light, delivery, personal trainer, look, etcétera, que están incorporadas a nuestro léxico y que a menudo también hemos adaptado al español o castellanizado como en el caso fútbol por football.

3) **Palabras conocidas**: Resulta también útil capitalizar nuestro conocimiento previo sobre la lengua que estamos aprendiendo al identificar aquellas palabras conocidas a partir de la búsqueda en nuestra memoria y de la confirmación de su valor en el contexto en el que aparecen.

4) **Palabras repetidas**: hay que enfocarse en las palabras que transmitan concepto, es decir, que tengan una carga de significado. Este tipo de vocablos se denominan *palabras conceptuales* y está constituido por sustantivos, verbos, adjetivos y adverbios. Podríamos decir que este es un *conjunto abierto* de palabras porque constantemente se van incorporando nuevos vocablos o neologismos. Las demás palabras, denominadas *estructurales*, abundan en todos los textos pero no nos ayudan a determinar el contenido de lo que leemos. Las palabras estructurales, conformadas por los pronombres, artículos, preposiciones y conjunciones, "estructuran" o relacionan la sucesión de palabras léxicas y pueden definirse por su función. Conforman un grupo *cerrado*.

Inglés Técnico II

5**) Indicaciones tipográficas**: los números, nombres propios, viñetas, tipo de letra especial (negrita, cursiva, mayúscula), "comillas", etcétera, suelen ir acompañadas de información importante

6) **Lectura de títulos y subtítulos**

PREDICCIÓN

A) Realice una predicción (hipótesis) acerca del contenido del texto utilizando las claves anteriores y las técnicas de skimming (lectura rápida) e intelligent guessing (adivinanza inteligente).

"SKIMMING" (LECTURA RÁPIDA)

1) Leer las primeras oraciones o el primer párrafo cuidadosamente.

2) Si el texto es largo, lea el 2º párrafo porque a veces el 1º párrafo es meramente una introducción y el 2º contiene más información sobre el tema.

3) Luego, dar un vistazo al comienzo de cada párrafo.

4) Seleccione algunas palabras claves.

5) Generalmente la oración tópico se encuentra al comienzo, pero a veces puede estar al final.

6) Saltee las partes que no le brinden información esencial.

7) Lea el último párrafo con mayor detenimiento. El autor suele incluir la conclusión en esta parte

"SCANNING" (BÚSQUEDA INFORMACIÓN ESPECÍFICA)

Ej.: en una biografía, buscar fecha de nacimiento, nacionalidad, estudios, según el ejercicio a realizar.

El contexto

Hay otro elemento que favorece la comprensión de un texto y que va más allá de las palabras: el contexto, nuestro conocimiento del tema. En general, la comprensión de un texto que desarrolla temas relacionados con nuestra disciplina nos demanda menos esfuerzo que el abordaje de un tema totalmente ajeno a nuestro quehacer.

En resumen, al acercarnos a un texto en inglés, ya contamos con unos cuantos elementos que nos ayudarán:

1) Los aspectos formales

2) el vocabulario

3) el contexto.

Inglés Técnico II

Sintaxis

El español y el inglés tienen una estructura, una gramática, muy diferente. Lo que le da sentido al discurso en inglés es el orden en el que aparecen las palabras, es decir, LA SINTAXIS. Mientras que en español podemos decir "Juan escribe libros" o "Libros escribe Juan" sin que se altere el sentido de la información dada, en inglés sólo es posible decir "John writes books". "Books writes John" no es posible.

Además, un orden distinto de dos palabras, dan un sentido diferente a la frase. Por ejemplo, "the car key" significa "la llave del auto", mientras que "the key car" significa "el auto clave o principal"

Las oraciones tienen un sujeto y un predicado. Lo que precede al verbo en las oraciones afirmativas y negativas es siempre el sujeto. No existe el sujeto tácito (con excepción de las imperativas). En español, es suficiente decir "trabajan" para saber que nos referimos a "ellos" y al presente, en cambio, en inglés:

(1) trabajar = work

(2) trabajan = they work

(3) trabajamos = we work

(4) trabajo = I work

(5) trabajás = you work

(6) trabajaron = they worked

Como se puede ver en estos ejemplos, la palabra "work", con excepción del ejemplo (6), cambia de sentido según lo que la antecede.

Aprender a reconocer el o los verbos conjugados de la oración es fundamental para establecer de qué o quién se habla (cuál es el sujeto) y qué se dice de él (el predicado), además de entender si lo que dice la oración se refiere al presente, el pasado o el futuro.

Términos gramaticales: Definición y ejemplos

Término	Definición	Ej. en español	Ej. en inglés
Adjetivo	palabra que se agrega al sustantivo para designar una cualidad o determinar su extensión	Importante Bueno Útil	Important Good Useful *(No tienen género o número, es decir que no hay diferencias entre femenino/masculino singular/plural)*
Adverbio	Modifica el verbo, el adjetivo u otro adverbio.	Muy Bien Delicadamente	Very Well Delicately
Artículos	Preceden a los sustantivos	El- la- los- las Un – una Unos - unas	The A – an ---
Conectores	Palabras o frases que unen	Y Pero Para que	And But So that
Preposiciones	Palabras o frases que unen	De	Of

Inglés Técnico II

		En Delante de	In In front of
Pronombres	Reemplazan al sustantivo	Él Ellos Mío Le	He They Mine Him
Sustantivo	Palabra que designa un ser, objeto o lugar	Alumno Computadora Lugar	Student Computer Place
Verbo	Palabra que designa acciones (por extensión, palabras como "estar" o "parecer" son considerados verbos, aunque no denotan una acción)	Leer Aprender Ser Estar	Read Learn Be be
(verbo) infinitivo	Verbo sin conjugar	Caminar- leer- vivir	Walk –read - live
(verbo) participio	Caminado-leído-vivido	Walked- read- lived	
(verbo) gerundio (en inglés también lo llamaremos forma "ing")	Caminando- leyendo- viviendo	Walking- Reading- living	

LOS NÚMEROS

Los números cardinales

1-one		
2-two	12-twelve	20-twenty
3-three	13-thirteen	30-thirty
4-four	14-fourteen	40-forty
5-five	15-fifteen	50-fifty
6-six	16-sixteen	60-sixty
7-seven	17-seventeen	70-seventy
8-eight	18-eighteen	80-eighty
9-nine	19-nineteen	90-ninety
10-ten		
11-eleven		

0: el cero en inglés tiene varios nombres, según el contexto:

Zero

(en ciencias, medicina, economía)

Nil

(para el resultado de los deportes)

Oh

(al decir un número telefónico, por ejemplo)

Inglés Técnico II

Observe la terminación de los números entre el 13 y el 19.

Terminan en "-teen". De aquí derivan las palabras "teenager" o "teen" (=adolescente).

Ahora observe la terminación de los números entre el 20 y el 90. Terminan en "y".

Y si compara el 13 con el 30, el 14 con el 40 y así hasta llegar al 19 y el 90, verá que la única diferencia está en la terminación.

Además, tal vez ya haya observado que existe una relación entre la mayoría de las unidades y las decenas: por ejemplo:

six (6) – sixteen (16) – sixty (60).

Los números entre el 21 y el 99

Los números del 21 al 99 se forman combinando la decena con la unidad:

21: twenty-one

32: thirty-two

99: ninety-nine

45: forty-five

etc.

Desde 100 hasta el 1.000.000.000.000

100: a hundred o one hundred

110: a hundred and ten o one hundred and ten

400: four hundred 700: seven hundred 300: three hundred

885: eight hundred and eighty-five 251: two hundred and fifty-one

1,000: a thousand o one thousand

2,000: two thousand 6,000: six thousand 7,000: seven thousand

2,135: two thousand one hundred and thirty-five

1,000,000: a million o one million

1,200,560: a million two hundred thousand five hundred and sixty

En Estados Unidos un billón (a billion) es equivalente a mil millones.

En Estados Unidos 1,000,000,000 = a billion

La coma separa las unidades de mil y millón.

El punto separa decimales. Justo al revés de lo que ocurre en español.

Inglés Técnico II

Números y Palabras

Al igual que en español, en inglés se puede hablar figuradamente de “hundreds of articles” (cientos de artículos), “thousands of people” (miles de personas), “millions of years” (millones de años).

Números ordinales

En español	*En inglés (en letras)*	*En inglés (en números)*
1.º	First	1st
2.º	Second	2nd
3.º	Third	3rd
5.º	Fifth	5th
12.º	Twelfth	12th

Todos los demás números ordinales se forman agregando “th” al número cardinal.

En las decenas, la “y” cambia por “ie”.

twentieth

thirtieth

fiftieth

Por ejemplo, ahora estamos en el “twenty-first century” (el siglo 21).

Fracciones

Ejemplos:

1/3: one third

1/5: one fifth

etc.

½: half

¼: a quarter

Las fechas

En la forma de escribir la fecha, se percibe una diferencia entre el inglés británico y el norteamericano

En Estados Unidos: 06/09/22 = 9 de junio de 2022

Es decir, en inglés norteamericano, el orden es: ***mes – día – año.***

Los británicos escriben la fecha igual que nosotros.

Inglés Técnico II

FORMACIÓN DE PALABRAS

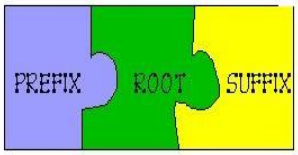

Formación del plural de los sustantivos

+s		**+es**	
Singular	*Plural*	*Singular*	*Plural*
Trial	Trials	Tomato	Tomatoes
Computer	Computers	Potato	Potatoes
Generator	Generators	Gas	Gases

y → es		is → es	
Singular	*Plural*	*Singular*	*Plural*
Body	Bodies	Analysis	Analyses
Study	Studies	Diagnosis	Diagnoses
Category	Categories	Thesis	Theses

Plurales irregulares		**Otros plurales irregulares**	
Singular	*Plural*	*Singular*	*Plural*
Life	Lives	Basis	Bases
Man	Men	Datum	Data
Woman	Women	Criterion	Criteria
Foot	Feet	Matrix	Matrices
Tooth	Teeth	Larva	Larvae
Child	Children		

Formación de palabras mediante prefijos y sufijos

Los **prefijos** se añaden al principio de una palabra y cambian su significado, por ejemplo: un + happy se convertiría en unhappy, que significaría not happy (infeliz). Los **sufijos**, por su parte, se añaden al final de las palabras y cambian su significado, y también pueden cambiar la categoría gramatical (es decir, cambiar si es sustantivo, adjetivo, adverbio, etc.). Por ejemplo: beauty + ful se convierte en beautiful, que significa full of beauty (lleno/a de belleza). Beauty es un sustantivo, pero beautiful es un adjetivo.

Inglés Técnico II

Sufijos usados con mayor frecuencia

-able / -ible	sustantivo + able = adjetivo	reason = razón; reasonable = razonable rely = confiar; reliable = confiable
-ee	verbo + ee = persona que recibe la acción	employ = emplear; employee = empleado
-en	adjetivo/sustantivo + en = verbo	wide = ancho; widen = ensanchar

-er	verbo + er = persona que realiza la acción	employ = emplear;
		employer = empleador
		read = leer;
		reader = lector
		research = investigar;
		researcher = investigador

	adjetivo + er = grado comparativo	long = largo;
		longer = más largo
		easy = fácil;
		easier = más fácil
		cheap = barato;
		cheaper = más barato

-est	adjetivo + est = grado superlativo	big = grande;
		biggest = el más grande
		small = chico;
		smallest = el más chico

-fold	número + fold = multiplicado por	twofold = doble threefold = triple
-ful	sustantivo + ful = adjetivo “que tiene”	power = poder; powerful = poderoso
-less	sustantivo + less = adjetivo; “carente de”	powerless = sin fuerza / sin potencia
-ly	adjetivo + ly = adverbio terminación “-mente”	slow = lento; slowly = lentamente
-ment	verbo + ment = sustantivo	develop = desarrollar development = desarrollo invest = invertir investment = inversión ship = barco shipment = embarque
-ness	adjetivo + ness = sustantivo abstracto	bright = brillante; brightness = brillantez
-ward	en dirección a	forward = hacia delante backward = hacia atrás downward = descendente
-ship	Estado o condición	Member: miembro Membership: membresía
-like	Que tiene las cualidades de	Childlike

Inglés Técnico II

Prefijos usados con mayor frecuencia

Counter	Transforman a la palabra en su contrario u opuesto	counteract = contrarrestar counterclockwise = en sentido contrario a las agujas del reloj
De- Dis-		dehydrate = deshidratar dismantle = desmontar
In- Il- Im- Ir		inefficient = ineficiente immature = inmaduro irresponsible inconsiderate = desconsiderado
Un-		unfair = injusto/deshonesto
Cross-	Trans- : a través de	Transcultural
Ill-	Mal	illdefined = mal definido
Mis-		misunderstanding = malentendido
Over-	Por encima / excesivo	Overprotection= sobreprotección
Under-	Por debajo / insuficiente	Underestimate= subestimar
Self-	Auto-	Self-service= autoservicio
Re-	Nuevamente	Rewrite= reescribir
Pre-	Anteriormente	Predate= antedatar
Post-	Posteriormente	Postwar= posguerra

Otros: anti (antisocial / antifreeze / antidepressant) / bi / mono / tri / ex / multi / mega / super (superstar-superclass) extra (extraordinary – extracurricular Ejercicio.

Intentar traducir las siguientes palabras sin usar el diccionario

Shorten	understaffed	Usefulness	usefulness	Fourfold	impracticality
Thicken	underdevelopment	Quietness	oversimplification	skillful	unpredictable
Punishment	playful	Payer	dictatorship	illegality	disagreement
Government	badness	caller	Friendship	jobless	refugee
oversized	misspell	reasonableness	overdose	northward	underclothes
tireless	oversleep	underestimate	driverless	overestimate	sharpen
overcrowded	skilful	worthless	immeasurable	overcharge	thankful
mispronounce	hopeful	undersized			

Inglés Técnico II

Completamos la oración usando "prefijo + palabra base (entre paréntesis)"

1. I'm sorry I _____ her message completely. I simply didn't pay attention (**UNDERSTAND**)
2. We _____ as soon as we got to the hotel, then we went for a walk (**PACK**)
3. She was here a minute ago but then she _____. I don't know where she went . (**APPEAR**)
4. We usually have similar opinions but I totally _____ with him on this subject (**AGREE**)
5. My homework was so bad that I had to _____ it (**WRITE**)
6. Her alarm clock didn't go off and she _____ (**SLEEP**)
7. It's _____ to bring those things with you on a plane (**LEGAL**)
8. She finally managed to _____ the door and we were able to go in (**LOCK**)
9. I _____ the movie but everyone else enjoyed it (**LIKE**)
10. I don't think I will pass the exam but I can _____ it in September (**TAKE**)
11. He wrapped my present so well that it took me five minutes to _____ it (**WRAP**)
12. I was so tried that I fell asleep without getting _____ (**DRESS**)
13. My spell checker corrects a mistake whenever I _____ a word (**SPELL**)
14. That bill can't be right. I think he _____ me (**CHARGE**)
15. This handwriting is impossible to read. It's _____ (**LEGIBLE**)
16. I thought it was very _____ of him to treat her in such a brutal way (**POLITE**)
17. He has been _____ for over two years now and there is no sign of him getting any work (**EMPLOY**)
18. She can never wait for five minutes. She's so _____ (**PATIENT**)
19. The store closed down but it will _____ next month (**OPEN**)
20. You can get a bad stomach from _____ (**EAT**).

LA FRASE SUSTANTIVA (FS)

¿Qué es una frase sustantiva?

Son dos o más palabras de las cuales una es el núcleo (o tema del que se habla) y la otra u otras son modificadores, es decir que modifican o restringen o califican el sentido de la palabra núcleo.

El núcleo es el sustantivo, un nombre común o propio o cualquier otra categoría de palabras que cumplan la función del sustantivo.

Es una frase en la que no intervienen verbos conjugados en su formación. Para traducirla se debe identificar primero el núcleo de la misma (sustantivo) y luego describir sus características en base a los pre-modificadores. Cabe destacar el orden fijo de esta estructura, es decir que el núcleo **o sea el sustantivo de la frase nominal** en el idioma inglés va a tener la posición de **último elemento a la derecha** y sus modificadores estarán a la izquierda de este núcleo siempre.

Ejemplos de Frase sustantiva

1) Computer

2) Computer systems

3) Computer systems engineering

4) Computer systems engineering Journal

5) Computer engineer

7) Children's computer

8) Children's computer class

Estructura de las Frases sustantivas anteriores

Pre-modificadores	**Núcleo**
XXX	computer
computer	systems
Computer systems	Engineering
Computer systems engineering	journal
computer	Engineer
Children´s	Computer
Children´s	Computer class

Pre-modificadores de la FN

Hay grupos de pre-modificadores que pertenecen a categorías cerradas, es decir, son esos y nada más que esos.

Categorías cerradas

Inglés Técnico II

a. Artículos

Determinante (singular y plural, masculino y femenino)	Indeterminante (singular, masculino y femenino)
the	A -an

b. Ausencia de artículos: Cuando se habla de una categoría en general, en inglés no se antepone un artículo al sustantivo.

people	Las personas
computers	Las computadoras
Research	La investigación

c. Adjetivos posesivos

	Singular	**Plural**
1ª persona	My	Our
2ª persona	Your	Your
3ª persona	His Her Its	Their

d. Adjetivos/ Pronombres demostrativos

	Singular (masculino y femenino)	Plural (masculino y femenino)
Señala lo que está cerca	This	These
Señala lo que está lejos	That	Those

e. Otros pre-modificadores

De orden	De posición	De alternativa
First Second Third Etc.	upper – lower back – front left – right inner - outer	another other either

f. Cuantificadores

(Palabras que dan idea de cantidad)

La tabla los presenta en sentido decreciente, de “gran cantidad” de algo a “nada”.

a lot (of) a great number of a great amount of a great deal of	
Many	Much

Inglés Técnico II

Some	
A few	A little
Any	
Few	Little
No	

"many/much" y "few/little" acompañan distintos tipos de sustantivos:

"many" y "few" van seguidos de sustantivos en plural

"much" y "little" van seguidos de sustantivos que no denotan algo que se cuente por la unidad (por ejemplo, "money", "dinero"; no decimos 1 dinero, 2 dineros).

Cuando "any" se usa en la forma afirmativa, no indica cantidad, sino cualquiera.

Es decir:

There is not any evidence (oración negativa) → No hay pruebas/evidencia

Is there any evidence? (oración interrogativa) → ¿Hay pruebas?

Any evidence will be enough (oración afirmativa) → Cualquier prueba será suficiente.

g. "all" versus "every"

Cómo funcionan estas palabras:

On Saturdays I'm busy all day. → Los sábados estoy ocupado/a todo el día.

I'm busy every day. → Estoy ocupado/a todos los días (o cada día de la semana)

"all" al igual que "the whole" significa "todo", "entero"

"every" significa "cada" o "todos"

El "Caso posesivo"

Ejemplos:

1. the students of Mr. Black

2. the jobs of women

3. an association of engineers

Si bien los ejemplos citados son gramaticalmente correctos en inglés, la frecuencia con la que se usan es mucho menor que las formas que aparecen a continuación:

1. Mr. Black's students

2. Women's jobs

3. An engineers´ association

Inglés Técnico II

4. Ohm's law and Kirchho's laws

Formación del "Caso posesivo"

Poseedor	Nexo	Lo poseído	Ejemplo
Sustantivo singular	's	Sustantivo	Mr. Brown's wife a country's economy
Sustantivo plural no terminado en "s"	's	Sustantivo	men's hobby children's games
Sustantivo plural terminado en "s"	'	sustantivo	Engineers' associations boys' games

Post – modificadores de la FN

a) Post-modificadores introducidos por "which" – "that" – "who" – "whose" – "where" – "when" (pronombres relativos)

Ejemplos:

1. Electrical engineering is a field of engineering ***that*** generally deals with the study and application of electricity, electronics, and electromagnetism.

2. An electrical engineer is someone ***who*** works in a very wide range of industries and the skills required are likewise variable.

5. Elsner d.o.o. is a company ***which*** deals with lifting, loading, unloading and transferring of heavy cargoes, such as different machines and equipment.

4. Al Schoenbrunn was an engineer ***whose*** career involved the construction of nuclear reactors.

5. Chapman is a university ***where*** professors know your name and want to know what you are thinking.

6. This will show the time ***when*** you last rebooted the computer.

Núcleo de la FN, post-modificado	Pronombre relativo	Verbo conjugado de la proposición que post-modifica
Branch	That	Deals with
Electrical engineer	Who	works
Company	Which	Deals with
Al Schoenbrunn	Whose (career)	involved
Chapman	Where	(professors) know
Time	When	(you) rebooted

Estas oraciones tienen siempre un mínimo de **dos verbos conjugados:** uno en la parte principal de la oración y otro en el post-modificador:

Los pronombres relativos también pueden aparecer detrás de una coma o detrás de una preposición.

Normalmente se los traduce al español por: que, quien, el cual, los cuales, cuyo, donde.

Inglés Técnico II

b) La forma "-ing" como post-modificador

1. Courses **containing** a lot of units are hard to study.

2. Young people **studying** a career need to make a big effort.

3. Our university has 500 professionals, **offering** complex knowledge to students.

4. Information **including** phone numbers is necessary in every course.

Núcleo de la FN, post-modificado	**Forma "ing"**	**Objeto de la forma "ing"**
courses	containing	A lot of units
Young people	studying	A career
professionals	offering	Complex knowledge
information	including	Phone numbers

Normalmente se traducen al español por **"que + verbo en presente**" (por ejemplo, "los cursos que contienen …")

c) El participio pasado como post-modificador

1. Get a consent from students **admitted** to an international course.

2. Students **graduated** in 2009 are present at the ceremony.

3. A mechanical engineer is a person **trained and educated** to provide efficient solutions to the development of processes and products.

Núcleo de la FN, post-modificado	*Participio pasado*	
Students	admitted	To an international course
Students	graduated	In 2009
Person	Trained and educated	To provide…

Ejemplos de frases sustantivas

- New technologies that can reduce our dependence on coal, oil, and natural gas
- energy sources that are readily available all over the world
- the amount of greenhouse gas emissions that humans create
- their carbon footprint
- other sources of green energy
- Renewable energy sources

Inglés Técnico II

- the biggest market share
- our increasing energy demands
- Major structural changes in the production of renewable energy
- emerging technologies
- investors who choose to "go green"
- Computer-aided design
- Computer-aided design systems
- Control unit
- Unit control
- Digital integrated circuits
- Global positioning system (GPS)
- Graphics processing unit
- Real-time processing
- Signal processing
- Unwanted disturbances
- Random Access memory
- General purpose high performance computer

Inglés Técnico II

EJERCICIO

What is the circular economy?

The circular economy is a model of production and consumption, which involves sharing, leasing, reusing, repairing, refurbishing and recycling existing materials and products as long as possible. In this way, the life cycle of products is extended.

In practice, it implies reducing waste to a minimum. When a product reaches the end of its life, its materials are kept within the economy wherever possible thanks to recycling. These can be productively used again and again, thereby creating further value.

This is a departure from the traditional, linear economic model, which is based on a take-make-consume-throw away pattern. This model relies on large quantities of cheap, easily accessible materials and energy.

Also part of this model is planned obsolescence, when a product has been designed to have a limited lifespan to encourage consumers to buy it again. The European Parliament has called for measures to tackle this practice.

Benefits: why do we need to switch to a circular economy?

To protect the environment

Reusing and recycling products would slow down the use of natural resources, reduce landscape and habitat disruption and help to limit biodiversity loss.

Another benefit from the circular economy is a reduction in total annual greenhouse gas emissions. According to the European Environment Agency, industrial processes and product use are responsible for 9.10% of greenhouse gas emissions in the EU, while the management of waste accounts for 3.32%.

Creating more efficient and sustainable products from the start would help to reduce energy and resource consumption, as it is estimated that more than 80% of a product's environmental impact is determined during the design phase.

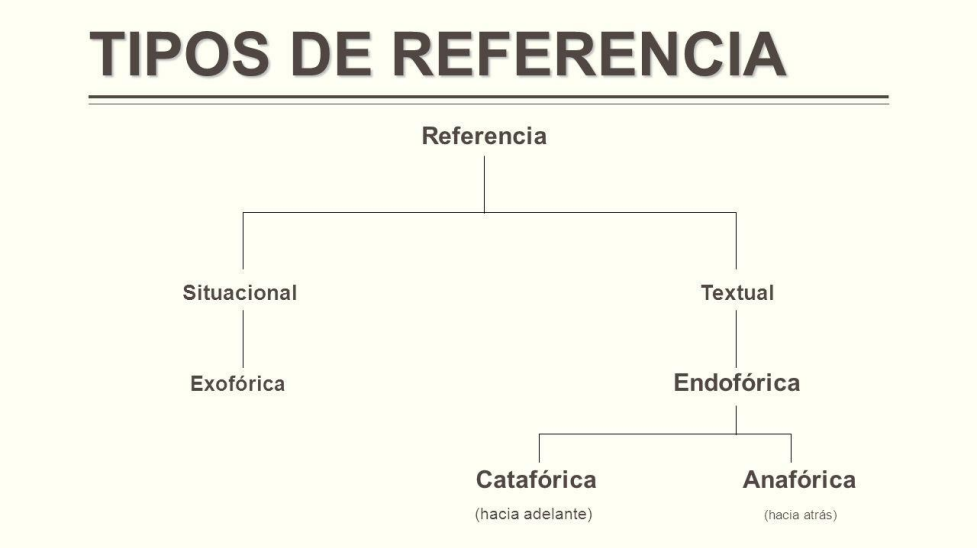

A shift to more reliable products that can be reused, upgraded and repaired would reduce the amount of waste. Packaging is a growing issue and, on average, the average European generates nearly 180 kilos of packaging waste per year. The aim is to tackle excessive packaging and improve its design to promote reuse and recycling.

Actividades

Todas las frases subrayadas en el texto son frases sustantivas. ¿Cómo las traduciría?

Inglés Técnico II

REFERENCIA CONTEXTUAL

Tipos de **REFERENCIA ENDOFÓRICA**:

1. **REFERENCIA ANAFÓRICA**: un elemento del texto remite a otro que apareció anteriormente.
   a) Stuart Russell and Peter Norvig proceeded to publish, Artificial Intelligence: A Modern Approach, becoming one of the leading textbooks in the study of AI. In it, they delve into four potential goals or definitions of AI.
   b) Many mobile devices incorporate speech recognition into their systems to conduct voice search—e.g. Siri—or provide more accessibility around texting.
2. **REFERENCIA CATAFÓRICA**: una unidad del texto remite a otra que aparece posteriormente.
   c) After ***he*** received ***her*** questions by email, the *engineer* immediately sent back the results to *Alice*.
3. **"ANTICIPATORY IT".** Con este recurso se introduce o "anticipa" el sujeto u objeto de una oración, especialmente cuando el sujeto u objeto es una SENTENCIA introducida por un infinitivo precedido por "to" o por un "that". Este "it" es un sujeto sustituto, pues el sujeto real está más delante en la oración.
   d) **It**'s remarkable *that so few of the patients suffered side effects*.
   e) **It** is important *to study English grammar*.
   f) **It** is nice *to see you again.*

4. **LA SUSTITUCIÓN** propiamente dicha se da cuando en un texto se utiliza un elemento no idéntico para no repetir, o para diferenciar o redefinir a otro antes utilizado. de

- Sustitución nominal: cuando el término que se sustituye es el núcleo de una frase sustantiva.

This is the old edition; I think I will buy the new **one** next week.

- Sustitución verbal: los sustitutos verbales en español son los verbos **hacer** y **ser**, generalmente acompañados por el pronombre complemento "**LO**". En inglés son los verbos **DO** y **BE**, acompañados por **SO/EITHER**.

I don´t know the meaning of half of those words and I don´t believe you do either.

I am pretty sure I will pass the exam and so will you.

REFERENCIA EXOFÓRICA

Por otra parte, usualmente encontramos la **REFERENCIA EXOFÓRICA**: La referencia exofórica es el mecanismo por el que una expresión lingüística alude a una entidad o acontecimiento de la realidad extralingüística. El referente se encuentra, pues, «fuera del texto».

g) As conversations emerge around the ethics of AI, **we** can begin to see the initial glimpses of the trough of disillusionment.

h) Let **me** explain the concept to **you.**

Inglés Técnico II

Ejemplos:

A. In March 2020, the European Commission presented the circular economy action plan, **which** aims to promote more sustainable product design, reduce waste and empower consumers
B. The new action plan announces initiatives along the entire life cycle of products. **It** targets how products are designed, promotes circular economy processes, encourages sustainable consumption, and aims to ensure that waste is prevented and the resources used are kept in the EU economy for as long as possible.
C. In a circular economy, products and the materials **they** contain are highly valued. **This** contrasts with the traditional, linear economic model, **which** is based on a 'take-make-consume-throw away' pattern.
D. Chemistry energy: It is the **one** obtained from the chemistry reaction derived from the electrons flow between two poles of different polarity placed within an electrolyte, for example, a pile.
E. DELPHIE´S Hobby Shop is an online service which has two special-interest areas: **one** is classic vehicles and **one** is new cars and technology.
F. Most programs are user-friendly but **some** are very complicated.
G. Price is important to some people, while quality is important to **others**.
H. Some students read slowly and know it; others read slowly and don't know it. **The former** can be helped more easily than **the latter.**
I. There are two technologies at work in a PC: **one** allows raw data to get into the computer and **the other** allows the computer to figure out what the data mean.
J. There is a struggle between "web-services" and the "semantic web". **The former** was thought to be rooted in the W3C and academia, **the latter** in IBM-Microsoft-Sun & Industry.
K. There is no best answer to the question which online service is the best. Rating a potential online service over **another** is entirely subjective. Price is important to some people, while the number of files available for download is important to **others**.
L. When talking about computers, both hardware and software need to be considered. **The former** refers to the actual machinery, whereas **the latter** refers to the programs that control and coordinate the activities of the hardware.
M. Customer service: Online virtual agents are replacing human agents along the customer journey. They answer frequently asked questions (FAQs) around topics, like shipping, or provide personalized advice, changing the way we think about customer engagement across websites and social media platforms.
N. It is relatively easy to install new programs in this computer.

Inglés Técnico II

O. An operating system is a master control program which controls the functions of the computer system as a whole and the running of application programs.
P. Everyone uses computers for many different purposes. These smart machines make their lives easier and more pleasant.
Q. Telecommunications is the transmission of signals over a distance for the purpose of communication. In modern times, this process almost always involves the sending of electromagnetic waves.
R. All computers do not use the same operating system. Therefore, it is important to assess the operating system used on a particular model before initial commitment because some software is only designed to run under the control of specific operating systems.
S. Bill Gates knew that PCs would be big business and he imagined Microsoft playing a center role in this industry.
T. For this purpose, we need to provide a broad background for the topic of the study and place the study within the large context of the scholarly research.
U. Here are a few simple steps that will help you frame the perspective of your research: (….).
V. The life experience and the knowledge readers bring to a text play a significant role in their interpretation of the text.
W. Physics is the branch of science that deals with the structure of matter and how the fundamental constituents of the universe interact. It studies objects ranging from the very small using quantum mechanics to the entire universe using general relativity.
X. Physics is the natural science that studies matter, its motion and behavior through space and time, and the related entities of energy and force. Physics is one of the most fundamental scientific disciplines, and its main goal is to understand how the universe behaves.

Inglés Técnico II

LOS TIEMPOS VERBALES EN VOZ ACTIVA

Todos los tiempos verbales se forman con sujeto + verbo.

Con excepción del Imperativo, no hay "sujeto tácito", como en español.

El sujeto de una oración puede ser una frase nominal o un pronombre.

Pronombres con función de sujeto

	Singular	Plural
1ª persona	I	We
2ª persona	You	You
3ª persona	He She It	They

"He" se refiere exclusivamente a persona masculina

"She", a persona femenina

"It", a lugar, objeto, idea, concepto, etc.

En el plural se pierde esta distinción, el único pronombre de 3ª persona es "they".

El Presente Simple del verbo "to be"

Este verbo tiene un régimen propio. Generalmente se traduce al español como "ser" o "estar", y en algunas instancias como "tener".

a. Forma Afirmativa

I am	We are
You are	You are
He is She is It is	They are

b. Forma negativa

Para formar el negativo se agrega "not": Sujeto + am/is/are + not (am not/ isn´t/ aren´t)

c. Forma interrogativa

Para formar la pregunta, se invierte el orden: Am/is/are + sujeto

Inglés Técnico II

Ejemplos:

- **This is a reading comprehension course. It is for students of engineering.**
- **Dr. Macdonald is a professor of mathematics at our University. She is from Scotland.**
- **Günter Blobel is the winner of the 1999 Nobel Prize in Physiology. He is a doctor in NY.**
- **I am a student of Mechanical Engineering at a private university.**

La estructura "there + be": Existencia de algo/alguien en un lugar (= "hay")

Ejemplos:

1. There is an interesting book about this subject in the library.

2. In the International System of Units (SI), there are six principal units from which the units of all other physical quantities can be derived.

3. There are 2 types of elements found in electrical circuits, active and passive.

El verbo "be", en la frase "there + be" concuerda con lo que sigue:

Para formar preguntas, se invierte el orden:

4. Is there information about this issue in the journal?

5. Are there any new books in the library?

Para formar el negativo se agrega "not"

6. There is not time for that.

7. There are not any students today.

is + singular

are + plural

La palabra "there" es invariable.

Inglés Técnico II

El Presente Simple de los demás verbos.

a. Presente Simple, Afirmativo

Sujeto	Verbo
I You We They	Infinitivo
He She It	Infinitivo + “s”

Ejemplos:

- **I study 4 hours a day.**
- **You live on the university campus.**
- **As engineers, we deal with measurable quantities.**
- **Voltage source provides the circuit with a specified voltage**
- **The general public sometimes confuses computer science with other areas that deal with computers, such as information technology (IT).**
- **General Electric manufactures nearly 400 appliances from refrigerators to dryers.**
- **Water boils at 100˚C.**
- **The sun rises in the east and sets in the west.**

Recordar

La terminación “s” o “es” en los verbos indica tercera persona singular, afirmativo, presente.

El verbo “have” (tener), en tercera persona singular, afirmativo, es “has”

Inglés Técnico II

b. Presente Simple, Interrogativo

Verbo auxiliar	Sujeto	Verbo principal
Do	I You We They	Infinitivo?
Does	He She	

	It	

Ejemplos de preguntas:

- **Do you have a Master's Degree in Electrical Engineering?**
- **Does the professor have an exam today?**

Al aparecer el auxiliar "does" en la tercera persona del singular, el verbo principal no tiene "s" o "es" (como en la forma afirmativa).

c. Presente Simple, Negativo

Sujeto	**Verbo auxiliar**	**Verbo Principal**
I You We They	do not (don´t)	Infinitivo
He She It	does not (doesn´t)	

Ejemplos de negaciones:

- **Our students do not have classes on Saturday.**
- **Mr. Hunt does not work on Sundays.**
- **Computers don´t think, but they solve complicated operations.**

d. Adverbios (modificadores de verbos) que suelen acompañar al Presente Simple

Indicadores de frecuencia

De SIEMPRE a NUNCA	Always Usually/generally Often Sometimes Rarely/occasionally/hardly ever/seldom Never		
Cada (8 horas) / todos (los años)	Every 8 hours Every day Every week Every month Every year		
X vez / veces por día / semana / etc.	Once Twice Three times Four times	a	day week month year

Inglés Técnico II

e. Usos más frecuentes del Presente Simple

- Definiciones
- Descripciones
- Leyes (de alguna ciencia)
- Actividades cotidianas
- Enunciados de verdades que se consideran indiscutibles

El presente Continuo: am/is/are + forma –ing

a. Presente Continuo, Forma afirmativa

I	am	conducting developing lecturing increasing doing studying
You	are	
He She It	is	
We You They	are	

Ejemplos:

- **We are conducting research on artificial intelligence.**
- **Mr. Howel is lecturing on the advantages of the newly discovered system.**
- **I am finishing my report on binary numbers.**
- **Are you working on a grant?**
- **These professionals are not developing a new technique, they're improving it.**

b. Presente Continuo, Forma interrogativa

Am	I	conducting? developing? lecturing? increasing? doing? studying?
Are	you	
Is	he she it	
Are	you	

c. Presente Continuo, Forma negativa

I	am not	conducting
You	are not (aren´t)	

Inglés Técnico II

He She It	is not (isn´t)	developing lecturing increasing doing studying
We You They	are not (aren´t)	

d. Adverbios (modificadores de verbos) que suelen acompañar al Presente Continuo

now – at present – these days – nowadays – currently

e. Usos más frecuentes del Presente Continuo

• Descripción de una actividad que se está llevando a cabo en el momento en que se la nombra

• Acción futura que se llevará a cabo de acuerdo con una agenda o plan

El Pasado Simple del verbo "to be"

Ejemplo:

Two Nobel Prizes in Physiology or Medicine were for two Argentinean scientists. In 1947, the Prize was for Dr. Housay and in 1984, it was for César Milstein. Dr. Milstein shared the prize with Niels K. Jerne and Georges Köhler.

Presente	Pasado
Am Is	Was
Are	Were

Al igual que en el presente, se agrega "not" para formar el negativo y se invierte el orden para formar la pregunta:

sujeto + was/were + not

was/were + sujeto

Ejemplos:

- **Niels K. Jerne and Georges Köhler were not from Argentina.**
- **I was not in the laboratory at 5.00 yesterday.**
- **Was he from Buenos Aires?**
- **When were those students absent?**

Inglés Técnico II

El Pasado Simple de los demás verbos

Ejemplos:

Dr. Milstein shared the prize with Niels K. Jerne and Georges Köhler.

The students practised for one hour every day last month.

Los verbos se dividen en ***regulares o irregulares***, de acuerdo a la manera en que forman el pasado (afirmativo) y el participio.

Los verbos ***regulares*** agregan "ed" o solamente "d" al infinitivo. En algunos infinitivos terminados en "y", la "y" cambia por "i".

Los verbos ***irregulares***, como su nombre lo indica, no siguen ninguna regla para formar el pasado o el participio.

El verbo "***have***" (tener), en pasado, es "had"

Ejemplos de verbos irregulares:

The Head of the Laboratory came to our Institution last week.

Mr. Chair made a speech.

Computer science began to be established as a distinct academic discipline in the 1960s, with the creation of the first computer science department and degree programs.

a. Pasado Simple, Afirmativo

Sujeto	Verbo
I You He She It We You They	went… saw… skied… wrote… had… Etc…

b. Pasado Simple Interrogativo

Verbo auxiliar	Sujeto	Verbo principal
Did	I You He She It We They	go….? see…? ski….? write…? have…? etc…?

Inglés Técnico II

Ejemplos de preguntas:

Did you visit the research centre when you were there?

Did the teacher have a meeting today?

When did the first voice-controlled computer appear?

c. Pasado Simple, Negativo

Sujeto	Verbo auxiliar	Verbo principal
I You He She It We They	did not (didn´t)	go see ski write have etc…

Ejemplos de negaciones:

Our students did not (didn´t) come to classes on Saturday last year.

Dr. Hunt did not (didn´t) lecture yesterday.

He did not (didn´t) understand the importance of the topic.

d. Adverbios (modificadores de verbos) que suelen acompañar al Pasado Simple

yesterday = ayer — an hour ago = hace una hora

last week = la semana pasada — 3 weeks ago = hace tres semanas

last month = el mes pasado — 6 months ago = hace seis meses

last year = el año pasado — 2 years ago = hace dos años

e. Usos más frecuentes del Pasado Simple

• Relatar hechos ocurridos en el pasado

• Describir situaciones pasadas

• En oraciones condicionales, o después del verbo “wish” se traduce al español como pretérito del subjuntivo (if I had the chance: Si tuviera/tuviese la oportunidad)

Inglés Técnico II

El Pasado Continuo - was/were + forma –ing

Ejemplos

- **What were the faculty members doing when the news from the Nobel Prize arrived?**
- **The students were not using the lab at that time.**
- **It was not raining when we arrived here.**
- **They were analyzing the results.**

Como se puede observar en los ejemplos, la forma interrogativa se forma anteponiendo 'was' o 'were' al sujeto y la forma negativa, agregando 'not' detrás del verbo 'be'.

a. Usos más frecuentes del Pasado Continuo

• Para enfatizar la continuidad de una acción en el pasado.

• Para dar un marco dentro del cual tuvo lugar otra acción.

Generalmente se traduce al español como pretérito imperfecto (usaban, fermentaban, llovía) o como "estaba lloviendo/ haciendo / usando", etc.).

El Presente Perfecto - have/has + participio

Ejemplos

- **We have been members of the Association for ten years.**
- **The students have not completed their studies yet.**
- **Professor Weis has not taught here since January.**
- **I have investigated this.**
- **Virtual reality has been widely used for entertainment purposes.**

Ver recuadro sobre verbos regulares e irregulares

a. Presente Perfecto, Forma afirmativa

Sujeto	Auxiliar	Verbo principal (participio)
I We You They	have	searched made seen collected etc.
He She It	has	

Inglés Técnico II

b. Presente Perfecto, Forma Interrogativa

Auxiliar	Sujeto	Verbo principal (participio)
Have	I you we they	searched? made? seen? collected? etc.
Has	he she it	

c. Presente Perfecto, Forma Negativa

Sujeto	Auxiliar	Verbo principal (participio)
I We You They	have not (haven´t)	searched made seen collected etc.
He She It	has not (hasn´t)	

d. Adverbios (modificadores de verbos) que suelen acompañar al Presente Perfecto

already – yet – just – always – never – since – for

e. Usos más frecuentes del Presente Perfecto

i) Para indicar que una acción ocurrió antes de ahora. Lo importante no es cuándo ocurrió, sino que haya ocurrido, por sus implicancias en el presente. Generalmente se traduce al español por un tiempo pasado.

Controlled trials have proved that … = Los estudios comprobaron que…

ii) Para indicar una acción que se ha desarrollado durante un período que llega hasta el presente.

We have been members of the Association for ten years = Hace diez años que somos socios de la Asociación.

<u>El Pasado Perfecto had + participio</u>

Ejemplos

- **No scientist had reviewed before whether the system worked or not.**
- **By 5.00 p.m., students had finished their practice.**

Inglés Técnico II

- **Had you already submitted your paper when you got the invitation?**
- **When we got there, they had already finished the project.**

a. Usos más frecuentes del Pasado Perfecto

• Para indicar la anterioridad de una acción con respecto a un momento en el pasado o a otra acción, también pasada.

Normalmente se traduce como "había revisado/terminado/enviado/perdido",etc.

Los tiempos futuros

Futuro simple - will + infinitivo

Futuro continuo - will be + forma -ing

Futuro perfecto - will have + participio

Ejemplos

- **All faculty members will attend the meeting.**
- **When will the Dean arrive?**
- **The new system will not be ready until next week.**
- **The staff will be working on this issue all winter.**
- **We will have completed the research by November.**

a. Adverbios (modificadores de verbos) que suelen acompañar al Futuro

tomorrow – next week – next month – next year

El condicional - would + infinitive

would be + forma –ing

would be + participio

Ejemplos

- **We would appreciate it if you could tell us…**
- **The new candidates would be arriving tomorrow if weather conditions got better.**

Inglés Técnico II

EL MODO IMPERATIVO

Usos

Suelen expresarse a través del Modo Imperativo:

- Instrucciones
- Consignas
- Consejos
- Recetas
- Órdenes
- Publicidad

Ejemplos:

- **Come on!**
- **Discover your ancestry with DNA.**
- **Check with your professor before you start the exercise.**

Como este tipo de oraciones le dicen a quien las lea u oiga lo que tiene que hacer, el sujeto no se nombra, está implícito, es "you", es decir "tú", "usted", "vos", "ustedes".

Cuando la instrucción, consejo, etc., es negativo, es decir, de "no hacer" algo, se lo expresa por medio de "Don't".

Ejemplo:

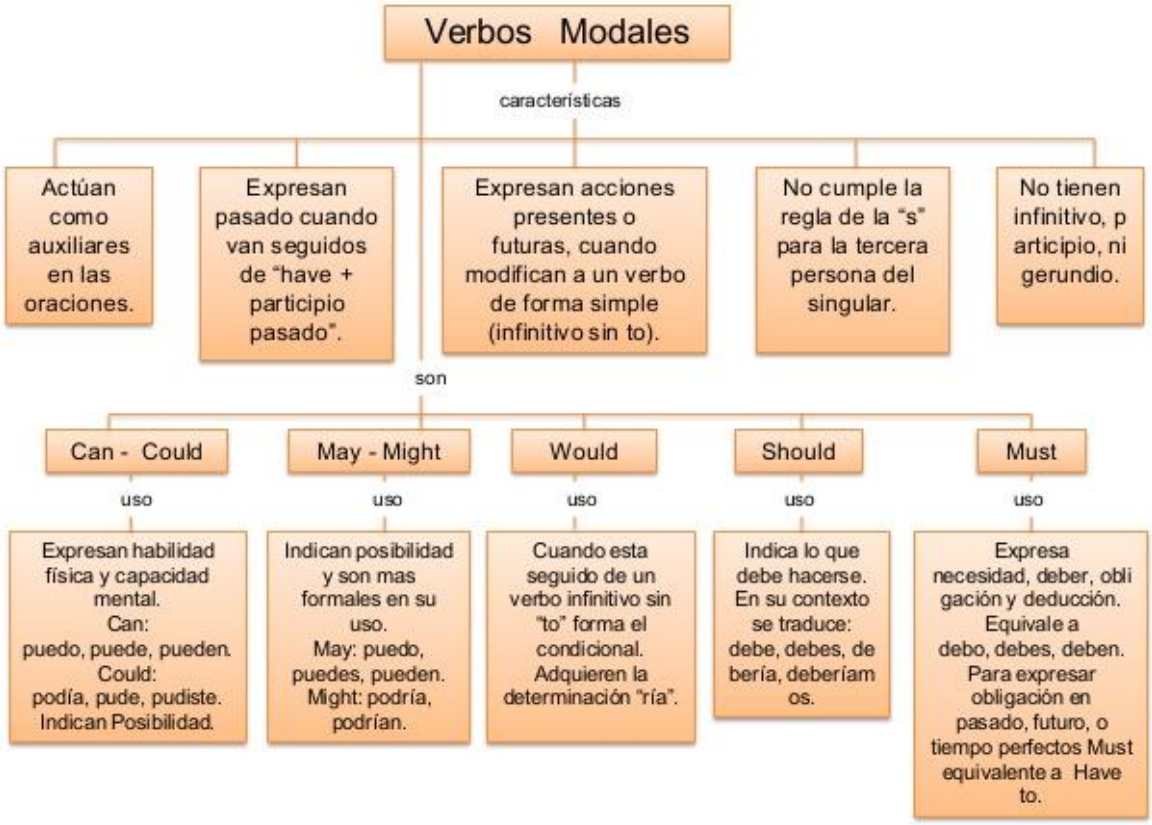

- **Don't do that anymore**
- **Don´t arrive late.**

Formación

Infinitivo	**FN como complemento del verbo**	**Complemento de modo, tiempo o lugar**
Come on	X	X
Study	your lesson	regularly
Check with	your professor	before starting the exercise
Don´t do	that anymore	X

Inglés Técnico II

LOS VERBOS MODALES

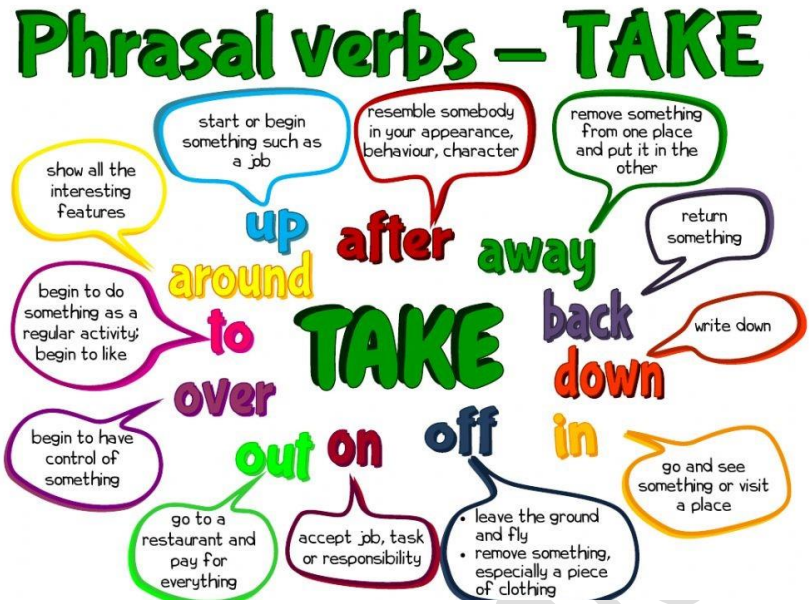

Ejemplos:

CAN	**Ability**	I **can** speak Spanish.
	Permission	**Can** I go to bathroom?
	Probability	It **can't** be Mark. He is in London.
COULD	**Past ability**	He **could** speak French when he was 6 years old.
	Past permission	He **could** go to theater.
	Probability (40%)	It **could** get much hotter in July.
	Request	I **could** lend you my notebook.
MAY	**Probability(50%)**	It **may** snow tomorrow.
	Permission	**May** I come in?
MIGHT	**Probability (35% or less)**	It **might** rain today.
MUST	**Prohibition**	You **mustn't** speak loudly. It is hospital.
	Deduction/probability(100%)	The teacher **must** be Mark. I've seen his bicycle outside.
SHOULD	**Advice**	You **shouldn't** smoke. It is unhealthy.
WILL	**Prediction**	I think he **will** study harder this time.
	Spontaneous decision	Oh, it's very hot today. I'**ll** open the window.

VERBOS PREPOSICIONALES

El verbo está acompañado por un adverbio o preposición y cambia de significado.:

1. Get on | Subir: The bus was full. We couldn't get on.
2. Come back | Volver a algún lugar: Sally is leaving tomorrow and coming back on Saturday.
3. Break down | Dejar de funcionar, dejar de operar (romperse): Sorry I'm late. The car broke down.
4. Look out | Ser cuidadoso, estar atento, permanecer atento: Look out! There's a car coming
5. Take off | Despegar: It was my first flight. I was nervous as the plane took off.
6. Get by | Arreglárselas: My french isn't very good, but it's enough to get by.
7. Run away (from) | Escaparse, huir, alejarse: Why did you run away from me?
8. Keep up (with) | Llevar el ritmo: You're walking too fast. I can't keep up with you.
9. Look forward (to) | Estar pendiente/emocionado por algo que va a pasar, esperar algo, mirar hacia adelante: Are you looking forward to your holiday?
10. Fill in (U.K) – Fill out (U.S.A) | Escribir, rellenar un formulario o documento: Please fill in the application form and send it to us.
11. Take somebody in | Engañar, ser engañado: The man said he was a policeman and I believed him. I was completely taken in.
12. Drop out |Dejar de hacer algo justo antes de terminar: Gary went to university but dropped out after a year.
13. Work out | Hacer ejercicio físico.: Rachel works out at the gym three times a week.
14. Work out | Desarrollarse, progresar, elaborar: Good luck for the future. I hope everything works out well for you.
15. Work something out | Calcular, pensar acerca de un problema y hallar la respuesta: 345 x 76? I need to do this on paper. I can't work it out in my head.

- **This system is as fast as that one.**
- **The new system is not as expensive as the last one.**

La doble comparación: (cuanto más / menos …, más /menos)

the more, the better

Ejemplos:

- **The larger the carrying capacity, the more power that can be put into the software application.**
- **The more RAM your computer can hold, the better.**
- **The more RAM and the more powerful the processor, the more expensive it will be.**

Inglés Técnico II

CONECTORES O NEXOS

Conectores

Los conectores son nexos o enlaces gramaticales cuya función es explicitar las relaciones semánticas que existen entre dos o más enunciados o bien entre elementos que componen un mismo enunciado. Es necesario destacar que el conector no establece la relación (la que existiría a pesar de que el conector no estuviera), sino que la explicita.

Ejemplo:

Observa atentamente los enunciados A y B:
• A: Carla salió de su casa con tiempo de sobra para llegar a clases a la hora.
• B: Llovía a cántaros y llegó atrasada.

A pesar de que los enunciados A y B se nos presentan por separado y sin conectores entre ellos, somos capaces de inferir que la relación entre ambos es de oposición, pues lo esperable cuando una persona sale con tiempo suficiente para trasladarse, es que llegue a tiempo a su destino, por lo tanto, el que Carla haya llegado atrasada implica algo opuesto a lo esperado.

Ahora bien si tomamos los enunciado A y B e insertamos entre ellos un conector que dé cuenta de lo que acabamos de decir, lo que estaremos haciendo es explicitar esta relación de oposición semántica ya existente.

Observa atentamente:

Carla salió de su casa con tiempo de sobra para llegar a clases a la hora pero, como llovía a cántaros, llegó atrasada.

¿Qué otros conectores pudieron aparecer en el lugar de "pero"?

Se pudieron emplear conectores como sin embargo y no obstante, entre otros; esto se debe a que cumplen la misma función: explicitar una relación de contraste/oposición entre el sentido de los enunciados.

Tipos de relaciones semánticas más importantes

Los conectores pueden explicitar diversos tipos de relaciones entre los enunciados o entre partes de un enunciado. Las más frecuentes e importantes son los siguientes:

- **ADICIÓN-AGREGADO:**

in addition (to)	as well as	furthermore	moreover
(and)	aside from	apart from	besides
also	and also	both … and	along with

- **CAUSA-EFECTO:**
    - **CAUSA**

because (of)	*[since]*	*[as]*
due to	in view of	for
owing to		on account of

    - **EFECTO**

so	therefore	hence
thus	as a consequence	as a result
for this reason	*[then]*	with the result that
and so	consequently	

- **CONDICIÓN-PREDICCIÓN:** Introducen la condición que debe cumplirse para que se cumpla lo expresado en la proposición principal.

if	unless	as long as / so long as
provided / providing	or else	should (sintaxis invertida)
but for	*[when]*	have / be (sintaxis invertida)

- **SECUENCIA EN EL TIEMPO:** Establecen una relación de tiempo, indicando un suceso anterior, simultáneo o posterior.

as	earlier	at the same time
after	next	in the beginning
[when]	before	at this point / up to this point
[while]	later / on	first/ly
lately	ultimately	*[then]*
at last	meanwhile	eventually
since then	from … to	*[since]*

Ejemplos: Identificar el tipo de relación que introducen los siguientes conectores y traducir las oraciones.

1) **Green energy is any energy type that is generated from natural resources, <u>such as</u> sunlight, wind or water. It often comes from renewable energy sources <u>although</u> there are some differences between renewable and green energy.**
2) **<u>In order to</u> be deemed green energy, a resource cannot produce pollution, such as is found with fossil fuels. This means that not all sources used by the renewable energy industry are green. For example, power generation that burns organic material from sustainable forests may be renewable, but it is not necessarily green, due to the CO2 produced by the burning process itself.**
3) **Most IEEE members are electrical and electronics engineers, but the organization's wide scope of interests has attracted people in other disciplines as well (<u>e.g.,</u> computer science, mechanical engineering, civil engineering, biology, physics, and mathematics).**
4) **Green energy is important for the environment <u>as</u> it replaces the negative effects of fossil fuels with more environmentally-friendly alternatives).**
5) **The technology was developed by Italian physicist Federico Faggin in 1968, who later joined Intel <u>*in order to*</u> develop the very first Central Processing Unit (CPU) on one chip (Intel 4004).**
6) ***Both* commercial *and* free tools exist in various languages.**
7) **Debugging is a methodical process of finding and reducing the number of bugs, or defects, in a computer program or a piece of electronic hardware *thus* making it behave as expected.**
8) **Early computers *such as* Colossus and ENIAC were able to process between 5 and 100 operations per second.**
9) ***If* you click on that, that opens it up and shows you all your folders.**

Inglés Técnico II

10) ***In order to*** **replicate itself, a virus must be permitted to execute code and write to memory.** ***For this reason*****, many viruses attach themselves to executable files that may be part of legitimate programs.**
11) **Input/output: the communication between an information processing system (*such as* a computer) and the outside world possibly a human, or another information processing system.**
12) **Green energy is that which comes from natural sources, <u>such as</u> the sun. Clean energy are those types which do not release pollutants into the air, and renewable energy comes from sources that are constantly being replenished, <u>such as</u> hydropower, wind power or solar energy.**

<u>Conectores. Indicar qué tipo de conexión implican los siguientes conectores y las dos ideas que conectan (en ESPAÑOL)</u>

Electric field

The concept of the electric field was introduced by Michael Faraday. An electric field is created by a charged body in the space that surrounds it, and results in a force exerted on any other charges placed within the field. The electric field acts between two charges in a similar manner to the way that the gravitational field acts between two masses, and like it, extends towards infinity and shows an inverse square relationship with distance. **<u>However</u>**, there is an important difference. Gravity always acts in attraction, drawing two masses together, **<u>while</u>** the electric field can result in *either* attraction *or* repulsion. **<u>Since</u>** large bodies *such as* planets generally carry no net charge, the electric field at a distance is usually zero. *Thus* gravity is the dominant force at distance in the universe, **<u>despite</u>** being much weaker.

An electric field generally varies in space, and its strength at any one point is defined as the force (per unit charge) that would be felt by a stationary, negligible charge if placed at that point. The conceptual charge, termed a 'test charge', must be vanishingly small *to* prevent its own electric field disturbing the main field and must also be stationary to prevent the effect of magnetic fields. *As* the electric field is defined in terms of force, and force is a vector, **<u>so</u>** it follows that an electric field is also a vector, having **<u>both</u>** magnitude **<u>and</u>** direction. Specifically, it is a vector field.

Engineering

Engineering (from Latin ingenium, meaning "cleverness" and ingeniare, meaning "to contrive, devise") is the application of scientific, economic, social, and practical knowledge **in order to(1)** invent, design, build, maintain, and improve structures, machines, devices, systems, materials and processes. The discipline of engineering is extremely broad, and encompasses a range of more specialized fields of engineering, each with a more specific emphasis on particular areas of applied science, technology and types of application. One who practices engineering is called an engineer, and those licensed to do so may have more formal designations **such as(2)** Professional Engineer, Designated Engineering Representative, Chartered Engineer, Incorporated Engineer, Ingenieur or European Engineer.

History

Engineering has existed since ancient times as humans devised fundamental inventions **such as(3)** the pulley, lever, and wheel. Each of these inventions is consistent with the modern definition of engineering, exploiting basic mechanical principles to develop useful tools and objects.

The term engineering itself has a much more recent etymology, deriving from the word engineer, ***which(A)*** itself dates back to 1300, when an engine'er (literally, one who operates an engine) originally referred to "a constructor of military engines." In this context, now obsolete, an "engine" referred to a military machine**, i.e.(4),** a mechanical contraption used in war (for example, a catapult). Notable examples of the obsolete usage which have survived to the present day are military engineering corps, e.g., the U.S. Army Corps of Engineers.

The word "engine" itself is of even older origin, ultimately deriving from the Latin ingenium (c. 1250), meaning "innate quality, especially mental power, hence a clever invention."

Later, as the design of civilian structures such as bridges and buildings matured as a technical discipline, the term civil engineering entered the lexicon as a way to distinguish between those specializing in the construction of such non-military projects and those involved in the older discipline of military engineering.

Inglés Técnico II

Engineering is a broad discipline ***which(B)*** is often broken down into several sub-disciplines. These disciplines concern themselves with differing areas of engineering work. **Although(5)** initially an engineer will usually be trained in a specific discipline, throughout an engineer's career the engineer may become multi-disciplined, having worked in several of the outlined areas. Engineering is often characterized as having four main branches:

Chemical engineering – The application of physics, chemistry, biology, and engineering principles **in order to(6)** carry out chemical processes on a commercial scale, such as petroleum refining, microfabrication, fermentation, and biomolecule production.

Civil engineering – The design and construction of public and private works, such as infrastructure (airports, roads, railways, water supply and treatment etc.), bridges, dams, and buildings.

Electrical engineering – The design and study of various electrical and electronic systems, such as electrical circuits, generators, motors, electromagnetic/electromechanical devices, electronic devices, electronic circuits, optical fibers, optoelectronic devices, computer systems, telecommunications, instrumentation, controls, and electronics.

Mechanical engineering – The design of physical or mechanical systems, such as power and energy systems, aerospace/aircraft products, weapon systems, transportation products, engines, compressors, powertrains, kinematic chains, vacuum technology, and vibration isolation equipment.

Methodology

Engineers apply mathematics and sciences such as physics to find suitable solutions to problems or to make improvements to the status quo. More than ever, engineers are now required to have knowledge of relevant sciences for ***their(C)*** design projects. As a result, they may keep on learning new material throughout their career.

If multiple options exist, engineers weigh different design choices on ***their(D)*** merits and choose the solution that best matches the requirements. The crucial and unique task of the engineer is to identify, understand, and interpret the constraints on a design in order to produce a successful result. It is usually not enough to build a technically successful product; it must **also(7)** meet further requirements.

Constraints may include available resources, physical, imaginative or technical limitations, flexibility for future modifications and additions, and other factors, such as requirements for cost, safety, marketability, productibility, and serviceability. By understanding the constraints, engineers derive specifications for the limits within which a viable object or system may be produced and operated.

As with all modern scientific and technological endeavors, computers and software play an increasingly important role. As well as the typical business application software there are a number of computer aided applications (computer-aided technologies) specifically for engineering. Computers can be used to generate models of fundamental physical processes, ***which(E)*** can be solved using numerical methods.

One of the most widely used design tools in the profession is computer-aided design (CAD) software **like(8)** Autodesk Inventor, DSS SolidWorks, or Pro Engineer ***which(F)*** enables engineers to create 3D models, 2D drawings, and schematics of their designs. CAD together with digital mockup (DMU) and CAE software such as finite element method analysis or analytic element method allows engineers to create models of designs that can be analyzed without having to make expensive and time-consuming physical prototypes.

Source Code

Source code is the fundamental component of a computer program that is created by a programmer. It can be read and easily understood by a human being. When a programmer types a sequence of C language statements into Windows Notepad, for example, and saves the sequence as a text file, the text file is said to contain the source code.

Source code and object code are sometimes referred to as the "before" and "after" versions of a compiled computer program.

*Programmers can use a text editor, a visual programming tool **or** an integrated development environment to create source code. In large program development environments, there are often management systems that help programmers separate and keep track of different states and levels of source code files.*

Licensing of source code

Source code can be proprietary or open, and licensing agreements often reflect this distinction.

*When a user installs a software suite **like** Microsoft Office, for example, the source code is proprietary, and Microsoft only gives the customer access to the software's compiled executables and the associated library files that various executable files require to call program functions.*

By comparison, when a user installs Apache OpenOffice, its open source software code can be downloaded and modified.

*Typically, proprietary software vendors **like** Microsoft don't share source code with customers for two reasons: to protect intellectual property **and** to prevent the customer from making changes to source code in a way that might break the program or make it more vulnerable to attack. Proprietary software licenses often prohibit any attempt to discover or modify the source code.*

*Open source software, **on the other hand**, is purposely designed with the idea that source code should be made available **because** the collaborative effort of many developers working to enhance the software can, presumably, help make it more robust and secure. Users can freely take open source code under public licenses, **such as** the GNU General Public License.*

Purposes of source code

*Beyond providing the foundation for software creation, source code has other important purposes, as well. For example, skilled users who have access to source code can more easily customize software installations, **if** needed.*

Meanwhile, other developers can use source code to create similar programs for other operating platforms -- a task that would be trickier without the coding instructions.

*Access to source code also allows programmers to contribute to their community, **either** through sharing code for learning purposes **or** by recycling portions of it for other applications.*

BUSCAR EN EL TEXTO TODAS LAS PALABRAS ENCERRADAS EN CÍRCULO Y DETERMINAR SU REFERENTE.

LA FORMA –ING

La partícula –ing del inglés es una flexión que se agrega a la base de un verbo léxico:

Visit + ING = visiting

Drop + p + ING = dropping

create + ING = creating

Las palabras terminadas en –ing pueden tener distintas funciones dentro de la oración.

1) Para formar todos los tiempos continuos o progresivos

<table>
<tr><td colspan="2">Am
Is
Are</td><td rowspan="7">Forma “ing”</td></tr>
<tr><td colspan="2">Was
Were</td></tr>
<tr><td>Have
Has</td><td rowspan="2">Been</td></tr>
<tr><td>Had</td></tr>
<tr><td>Will</td><td rowspan="3">Be</td></tr>
<tr><td>Would</td></tr>
<tr><td>Can
May
Might
Should</td></tr>
</table>

En este caso se traduce con terminación -ANDO /-ENDO

He’s working for a small company these days. (Actualmente está trabajando para una pequeña empresa).

2) Premodificador de un sustantivo, en este caso su traducción corresponde a la de un adjetivo o frase preposicional.
We have received *discouraging* news. (Hemos recibido noticias desalentadoras).

The impact of *raising* prices. (El impacto de los precios en alza).

Competing activities = actividades que compiten

Counseling sessions = sesiones de consejería

The living cell = la célula viva

3) Posmodificador de un sustantivo, la traducción en este caso es “QUE” + verbo conjugado.

The boxes containing the applicants’ forms are in this office. (Las cajas que contienen las solicitudes de los aspirantes están en esta oficina).

4) Después de verbos copulativos, las formas –ing se traducen como adjetivos.

The film was boring. (La película fue aburrida).

Inglés Técnico II

5) Con función adverbial o en combinación de cláusulas, se traduce con terminación –ANDO / –ENDO:

He broke his leg skiing in the Alps. (Se quebró la pierna esquiando en los Alpes).

Walking to the bus stop, I ran into Peter. (Caminando rumbo a la parada del colectivo, me encontré con Peter).

6) Como sujeto de la oración o núcleo de una frase nominal.

Swimming is a healthy activity. (La natación / nadar es una actividad saludable).

The reading of the will took place in doctor Green's office. (La lectura del testamento se llevó a cabo en la oficina del doctor Green)

Strategic planning = Planeamiento estratégico

Change in training = Cambio en el entrenamiento

The latest findings = Los últimos hallazgos

Reading is important = El leer o la lectura es importante

7) Como complemento u objeto de un verbo. En este caso se suelen traducir como vebos en infinitivo.

That is lying. (Eso es mentir).

We like watching films. (Nos gusta mirar películas).

I call that cheating (A eso lo llamo hacer trampa).

8) Como objeto de una preposición. El equivalente es un verbo en infinitivo o un sustantivo.

Thank you for returning the book I lent you. (Gracias por devolver el libro que te presté)

Tips for improving = recomendaciones para mejorar

Strategies for overcoming barriers = estrategias para superar barreras

Sound advice in achieving optimal results = buenos consejos para lograr resultados óptimos

The importance of analyzing these results = La importancia de analizar estos resultados.

Inglés Técnico II

Para resumir, al trasladar la palabra que tiene –ing al español, esta podrá tomar cualquiera de las siguientes formas:

1) Verbo terminado en -ando o -endo.

2) Verbo en infinitivo.

3) Verbo conjugado para los tiempos pasado, presente o futuro, generalmente con la palabra "que" antepuesta.

4) Sustantivo.

5) Adjetivo o frase preposicional

Ejemplos:

- **Ampere: Standard unit for measuring an electric current.**
- **Another function of the operating system is executing and providing services for application software.**
- **Components are generally intended to be connected together, usually by being soldered to a printed circuit board.**
- **Electronics is distinct from electrical and electro-mechanical science and technology, which deal with the generation, distribution, switching, storage, and conversion of electrical energy to and from other energy forms using wires, motors, generators, batteries, switches, relays, transformers, resistors, and other passive components.**
- **Problem solving.**
- **Soon after that he published his findings, proving that an electric current produces a magnetic field as it flows through a wire.**
- **The ability of electronic devices to act as switches makes digital information processing possible. Interconnection technologies such as circuit boards, electronics packaging technology, and other varied forms of communication infrastructure complete circuit functionality and transform the mixed components into a regular working system.**
- **The electromagnetic force plays a major role in determining the internal properties of most objects encountered in daily life.**
- **There are four main effects resulting from these interactions, all of which have been clearly demonstrated by experiments.**
- **To represent the magnetic forces between current-carrying conductors.**
- **Source transformation is another tool for simplifying circuits.**
- **We now address the problem of delivering the maximum power to a load when given a system with known internal losses.**
- **In electrical engineering, we are often interested in communicating or transferring energy from one point to another.**
- **When considering the results, we must be very objective.**

Inglés Técnico II

- **Loop: A loop is any closed path in a circuit. A closed path is formed by starting at a node, passing through a set of nodes and returning to the starting node without passing through any node more than once.**
